

THE GLASS COCKPIT

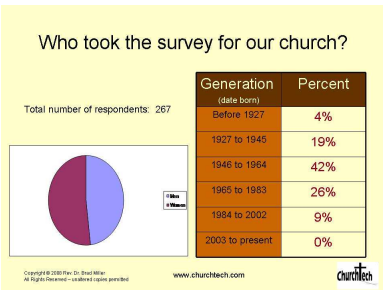

CHURCH HEALTH AND GROWTH TOOL

In the aviation industry, pilots rely on a variety of instruments and gauges to keep them informed about the functioning of the various important subsystems that are all required to

keep an aircraft safely in the air and on the proper course. As aircraft grew larger and more complex, their manufacturers faced two chal-

lenges: fitting all of the gauges into the limited space, and keeping the layout intuitive enough that pilots could quickly find the information that they needed. Now, using a variety of video displays in place of mechanical gauges, pilots can access the information that they require with the level of detail appropriate to any situation.

Churches are much more complicated than airplanes. They represent the collective insights, biases, experience, wisdom, hopes, and fears of each of their members. They tend to rely on a limited staff and lots of volunteers. They are entrusted with a mission more critical than any

All of these church health and growth variables are measured:

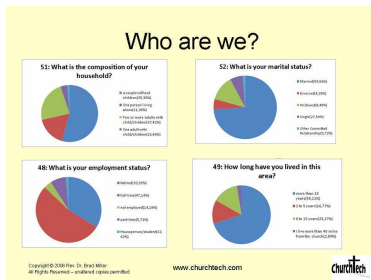

- Leadership
- Gift Leverage
- Governance
- Worship
- Small Groups
- Worldview
- Facilities
- Location
- Evangelism
- Vision
- Technology

aircraft has ever flown: the Great Commission. So, in order to help church leaders make wise decisions, ChurchTech has designed the Glass Cockpit to provide critical information about your congregation.

Just like glass cockpits in aviation, this

Glass Cockpit can be scaled and configured to the needs of churches in different situations. The whole process is done online for fast processing and error reduction. It is specially designed to accommodate participants without internet access and to statistically adjust for generational differences in internet usage. The standard package is \$499 for a 52 page report covering all 11 general areas of church health in detail. A "lite" version is also offered for churches that just want an annual check of the key variables. Specialty reports are also available, as are quantity discounts for judicatories and associations.

ChurchTech's Glass Cockpit is a powerful and cost-effective tool to help congregations assess their strengths, so that they can be more effective in accomplishing their respective ministries. It was developed by Dr. Brad Miller, based upon his work with hundreds of churches.
